Bus Ticket Managment System

Story

User Register/login using his credentials.

For Registration he inputs his details like Name,Contact , Email , Address , Password, Gender , Age

For login , user uses the email/username and password.

The user know from where he want to travel and where he needs to go

The user inputs the boarding point , Dropping point and Date of Travel

Based on the user inputs list of buses are shown to the user with all the details of the bus

The details of bus includes Name of bus,Seat type , Departure point , Dropping point , Departure and dropping time , seats available,Rating , price

If the user is satisfied with the Starting time , dropping time , price and rating then he initates for booking

If the seats are available for the particular date then user chooses the seats

After choosing the seats the user inputs the passenger details

Summary of whole travel is displayed to the user and if all the parameters are correct then the payment is done

After the payment, Ticket is generated with the bus details, passenger details , seat allocated and amount paid
